

Heterozygosity Details

Pet Name : Louie

The heterozygosity score acts as a mirror to inbreeding levels:

Inbreeding level: High genetic diversity, often seen in broader ancestral background such outcrossed or mixed-breed dogs 38.20%

Heterozygosity Score: 0.382

For purebreds, moderate scores like 28% are not unusual the breeding pools are often narrow. But if you're looking to breed, a moderate or high heterozygosity dog may complement a lower-diversity mate to boost overall vigor in offspring.

All Havaneses

Typical range 23.1% - 29.9%
